

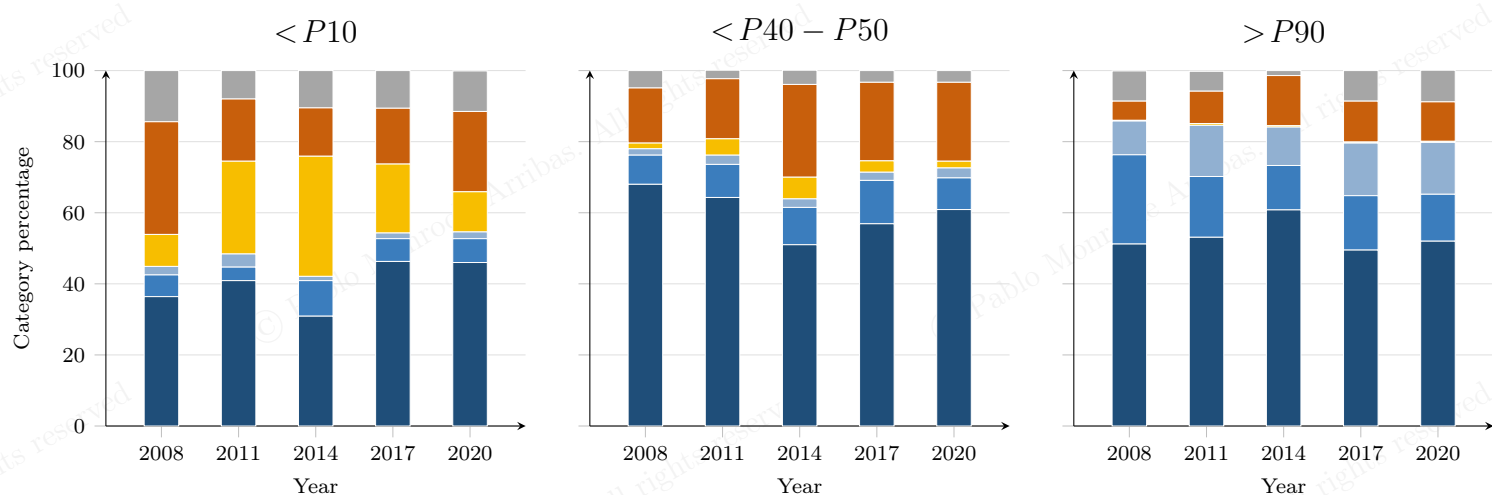

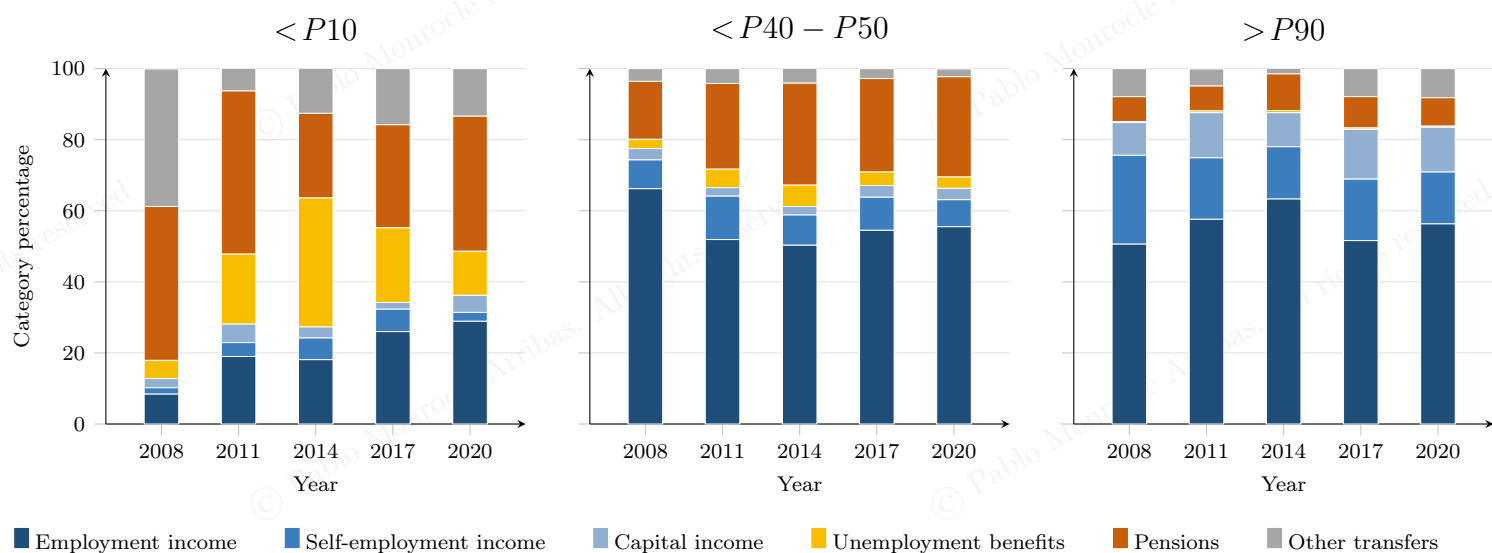

Graph 6. Composition of total income by source in Spain

Panel A. Groups by equivalised per-capita household income

Panel B. Groups by gross household income

Source: Own estimation based on the Spanish Survey of Household Finances (EFF, Banco de España).

Notes: Households are grouped by their position in the income distribution. Panel A is based on equivalised per-capita household income using the modified OECD scale. Panel B is based on gross household income. The three groups shown in each panel correspond to households below the 10th percentile, between the 40th and 50th percentiles, and above the 90th percentile. Each stacked bar shows the percentage composition of itemised household income by source in the corresponding year.
